==========
Project Code: STAN0184
Project Name: Hoover Institution-Survey of immigrant and non-immigrant communities
Prepared for: Dinsha Mistree, Stanford University - Hoover Institution
Interviews: 4101
Field Period: October 17, 2025 - October 29, 2025
Project Manager: Clara Cullen, clara.cullen@yougov.com
==========

YouGov interviewed 5303 respondents who were then matched down to a sample of 4101 to produce the final dataset. Five samples were collected: the main general population (GenPop), Black nonimmigrant, Hispanic, East Asian, and Indian American respondents. The matching was done to 2023 American Community Survey (ACS) group-specific frames on gender, age, race, and education. The matched sample sizes were as follows: GenPop, 1445 matched to 1150; Indian American, 1351 matched to 1051; Hispanic, 1160 matched to 932; East Asian, 1010 matched to 774; and Black nonimmigrant, 997 matched to 865.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity (for Genpop), years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

For the Hispanic and GenPop groups, the weights were additionally post-stratified on presidential vote choice in 2020 or 2024. For all groups, the weights were stratified on gender, age, race (for Genpop), and eudcation to produce the final weights: weight_genpop, weight_black, weight_hispanic, weight_eastasian, and weight_indian.

For the White non-Hispanic, non-Indian subgroup, respondents were drawn from within the GenPop sample and weighted. The weighting followed the same procedure used for the other groups: respondents were combined with the corresponding ACS frame and a logistic regression was estimated to generate propensity scores for inclusion in the frame. The propensity score function included age, gender, education, and region. The estimated propensity scores were divided into deciles and post-stratified to the frame to produce the final subgroup weight weight_white.

==========

Variable List

==========

| | |
|---|---|
| caseid | Case ID |
| weight_genpop | Weight (Genpop) |
| weight_hispanic | Weight (Hispanic) |
| weight_black | Weight (Black non-immigrant) |
| weight_eastasian | Weight (East Asian) |
| weight_indian | Weight (Indian) |
| weight_white | Weight (White Non-Hispanic) |
